

European Virtual Campus for Biomedical Engineering EVICAB

1.1.2006 – 31.12.2007

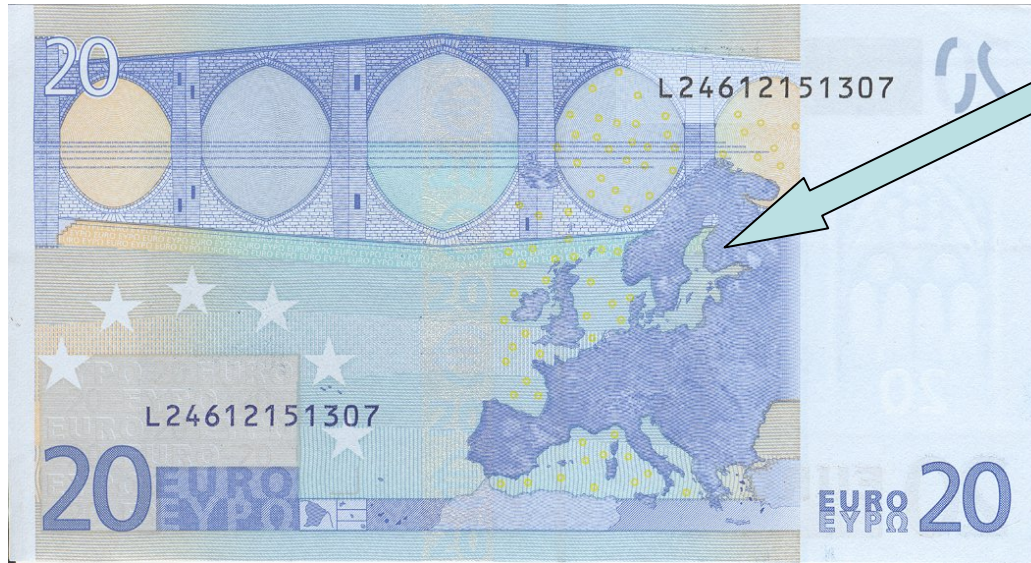

Project director:

Professor Jaakko Malmivuo

Ragnar Granit Institute

Tampere University of Technology

Internet education – Why?

Tampere

- Geographically, Finland is not in the center of Europe
- Tampere is 175 km north of Helsinki
- **On the Internet, every university is in the center of the world**

On the Internet you may draw the world map with your university in its center!

Internet education – Why?

- Biomedical engineering is a multidisciplinary science
- No university alone is able to produce high-quality, up-to-date educational material in its all subfields
- **Joining our competences we may do it together**

Internet education – Why?

- The target of the Bologna process is to enable the mobility of the students and the teachers
- The target of the BIOMEDEA process is to harmonize the biomedical engineering education in Europe
- **Internet education is a powerful tool in these concepts**

Internet education – Why?

- On the Internet, the same high-quality education will be available for all students in all European universities
- The Internet helps the students in choosing the right university for their studies
- **The Internet enables making the examination from any location**

European - Global

The first target
of EVICAB
is European

Because EVICAB
will be open access,
the study material
will be available
globally
